

Presented at the 3rd Ontolog F2F Workshop
(colocated with the 9th International Protege Conference, July 23~26, 2006)

“Natural, Semi-Formal, and Formal Ontologies: Bridging the Layers, Limits, and Lacunas”

Ontologizing the Ontolog Body of Knowledge -- Goals, Challenges & Opportunities

by

Peter P. Yim <peter.yim@cim3.com>

CIM3, ceo / ONTOLOG, co-convener

Stanford, CA, USA.

July 23, 2006

(v 1.03)

Outline

- **What is “Ontolog”
(a.k.a. “Ontolog Forum”)**
- **The “Ontologizing Ontolog”
Series of Events**
- **Purpose & Goals**
- **Challenges**
- **Opportunities**
- **Reflections**

ONTOLOG (aka. **Ontolog Forum**) est. Apr.2002

- **3 co-conveners** - PeterYim; LeoObrst & KurtConrad
- **Membership** - approx. 160; from 18 different countries
- **Hosted** on the CIM3 collaborative work environment infrastructure
- **Charter** - Ontolog is an open, international, virtual community of practice, whose membership will:
 - Discuss practical issues and strategies associated with the development and application of both formal and informal ontologies.
 - Identify ontological engineering approaches that might be applied to the UBL effort, as well as to the broader domain of eBusiness standardization efforts.
 - Strive to advance the field of ontological engineering and semantic technologies, and to help move them into main stream applications.
- **Activities:**
 - Weekly conference calls of active members
 - Monthly virtual Invited Speaker events
 - Scheduled Technical Discussions
 - Specific Projects: like [CCT-Rep], [Health-Ont], NHIN-RFI response, Upper Ontology Summit, Event podcast, Ontologizing the Ontolog Content ...
 - Resides on a virtual collaborative work environment which serves as a dynamic knowledge repository to the community's collective intelligence
- **We welcome your participation** – see: <http://ontolog.cim3.net/wiki/>

Working as Communities of Practice

What are CoP's anyway?

- **small groups of people who have worked together over a period of time. Not a team, not a task force, not necessarily an authorized or identified group. They are peers in the execution of "real work." What holds them together is a common sense of purpose and a real need to know what each other knows.**
(--John Seely Brown / ref: <http://ps1.cim3.net/ps.php?theurl=http://www.fastcompany.com/online/01/people.html#purp531>)
- **a group of professionals, informally bound to one another through exposure to a common class of problems, common pursuit of solutions, and thereby themselves embodying a store of knowledge.**
(--Peter & Trudy Johnson-Lenz / ref: <http://community.cim3.net/cgi-bin/wiki.pl?CommunityofPractice>)
- **groups of people who share a concern or a passion for something they do and who interact regularly to learn how to do it better.**
(--Etienne Wenger / ref: <http://www.ewenger.com/theory/index.htm>)
- **in the case of US eGov folks, it could be groups that work together along lines of business within the government that are dedicated to the support of certain business functions**
(ref: http://colab.cim3.net/cgi-bin/wiki.pl?DataReferenceModel_09_2004/TheGlossary_DRM_Vollv1#nid2K8F)

CoP's are just the beginning

- **CoP's allow us to bring the right people together, and allow these people to understand, over time, who has the real expertise, who they can work with, who they can trust, ...etc.**
- **To do real work, we still need:**
 - **streamlined processes, and**
 - **effective organization**
 - ***... the traditional processes and organizations that work in brick-and-mortar settings may not be optimal any more.***

introducing: The Fishnet Organization

An Organizational Form that the CWE aims at Supporting – leading us toward Open Virtual Enterprises

these are temporary (or semi-permanent) hierarchies, that emerge out of the CoP's, which capitalize on distributed capabilities to achieve specific purposes; when those purposes are achieved (or when the opportunities no longer exist), they disband, and the resources (people, knowledge, skill sets) are returned to the CoP's where they come from.

Ontolog – an open CoP

Caption: John McCarthy having a dialog with Doug Engelbart at a tavern ... with 'the fishnet' on the wall

Upper Ontology Summit

Ontolog / NIST - 15-Mar-2006

- 3:00pm - Position statements and overviews by custodians of the principal upper ontologies (10 minutes each)
 - DougLenat - OpenCyc - **slides**
 - AdamPease - SUMO - Slides
 - NicolaGuarino - DOLCE - **slides**
 - AldoGangemi - DOLCE - Description & Situation extensions (remote)
 - MichaelGruninger - PSL / ISO 18629 - **slides**
 - JohnBateman - Spatial Cognition, Robotics and Natural Language (remote) **slides**
 - BarrySmith - BFO (remote) - **slides**
 - MatthewWest - ISO 15926 - **slides**
- 4:45pm - Concluding remarks - SteveRay, Summit Chair
- 5:00pm - Adjournment

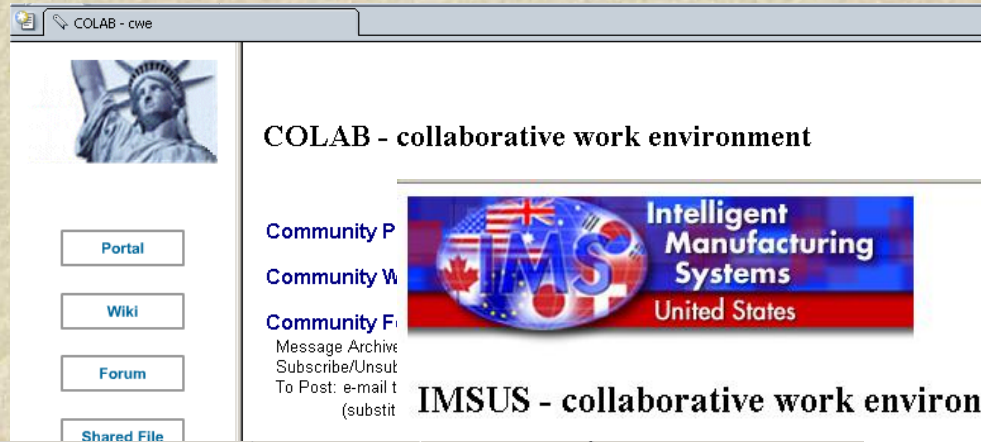

Networking with other Communities on the CIM3.NET

- Ontolog
- Protégé
- CWE-dev
- Bootstrap
- eGov: COLAB
- eGov: DRM
- project work & public forum
- NIST
- IMSUS: MPOSE
- Millennium Project (AC/UNU)
- Digital Art Ontology
- Hosting of: SUMO, CODS
- ... (more)

Ontologizing Ontolog

-- Purpose (for this series of events)

- 1) Providing better access to the Body of Knowledge
 - knowledge artifacts
 - tools
 - process
 - people
- 2) Using the opportunity to explore the landscape and the state-of-the-art for both technologies and approaches, on how this could actually be done
- 3) Employing the kinds of formal and informal semantic technologies and ontological engineering approaches that we've been 'talking about '
- 4) Plan to develop an ontology-based application to achieve the purpose, both as a proof of concept, and also to provide open example of a 'working application' and the process that people can look at, and
- 5) Build up enough interest and momentum to really do it -- funded, if at all possible, but on an open/voluntary-basis, if we have to.

Ontologizing Ontolog

-- Goals

- the hope is that we can engage the proponents of various approaches - OntologTaxoThesaurus, Concept Extraction & Clustering, Subject Maps, openIRIS, UIMA, Folksonomy, Semantic Web, Common Upper Ontology-extensions on a controlled Defining Vocabulary,- to showcase their solutions, using the "Ontologizing of the Ontolog Body of Knowledge" as their test case.
- ... even better, come up with some ways and means to allow these methodologies to be "integrated" into something that REALLY make sense (i.e. NOT just for the sake of the exercise), and is more comprehensive than any of the individual solutions.
- ... I believe that is what community members like BobSmith, DeniseBedford, EMichaelMaximilien, JackPark, PatrickDurusau, AdamCheyer, DavidFerrucci, MatthewWest, PeterMika, PatCassidy, etc. have all alluded to, all along ... more importantly, these experts are ALL telling us that we can already do a lot of whatever available technology NOW!
- ... No one has actually taken the project on, though. This series of event may hopefully, create that opportunity.

Challenges

- **Timing**
 - how soon do we want the solution?
 - is the technology even here, or ready for prime time?
- **Are we doing this for people? for machines? or BOTH?**
- **there should be no "value judgement" associated with more or less formality, upper or lower ontology**
 - ... the "value proposition" and "metrics" should be "does it solve my problem?"
- **Be precise, be holistic!**
 - ... culturally, we actually aren't very good at either!

Challenges

-- The “Knowledge” Gap

- "know-what" - understand your problem
 - What is your semantic application for?
 - Reference standards
 - Transaction process
 - Information Mapping or Harmonization
 - Machine-to-machine interoperation
 - Machine inference
 - Human Learning & Knowledge Discovery
 - improved search
 - recall
 - discovery
 - Natural Language Understanding (by machines)
 - ... others
- "know-how" - understand the alternative solutions, and which approach would be most relevant
- "know-where" & “know-who” - putting together the right resources (esp. a team with the right combined skill set; and then, of course, the funding)

(Ontology Enabled) Opportunities

■ for the Scientists

- visions from the likes of Engelbart, McCarthy, Lenat, Berners-Lee, Hendler, etc. will finally come to fruition
- decades of research can be realized in real, non-trivial implementations

■ for the Engineers

- we'll actually be able to build next generation machines (systems, networks, ...) that will off-load from humans, tasks (albeit simple ones) that requires some 'reasoning' and 'thinking'
- these application can actually affect (hopefully benefit) the lives of many millions

■ for the Marketeers

- a multi- multi- billion dollar market is right around the corner ...
- please don't kill it by “Hyping it up!”

... this is NOT a “zero-sum game”!

“Nothing Replaces Anything”

... Richard Dalton, IFTF

the DAO of it all

Live with the 'Duality' around us:

- the Cathedral vs. the Bazaar
- the Form vs. Free-form
- Discipline vs. Creativity
- Transaction Process vs. Collaborative Process
- Classic AI vs. Augmentation approaches
- the small 'o' vs. the big 'O' in Ontology
- Planned vs. Emergent behavior
- The reductionist vs. the holistic approach

we are not bound to choose *one* OR *the other*

Lao Zi had this figured out, circa 500 BC

Ancient Wisdom

*As for the Way (“Tao”)
the Way that can be spoken of is not the constant Way*

*As for names
the name that can be named is not the constant name*

The nameless is the beginning of the ten thousand things

The named is the mother of the ten thousand things

“Tao Te Ching” - Lao Tzu (circa 500 B.C.)

Ontolog's key Differentiation

Activities are community driven; we are neutral, open, and we are not answerable to any authority or institutional structure, except for (explicitly) our charter & IPR policy, and (implicitly) our professional integrity.

*We are adamant about collaboration, sharing and open knowledge
... and are trying to spur organic or emergent behaviour
in the community and our project teams*

Will we be able to make the best of these opportunities?

one last conjecture:

... it might just depend on

'our attitude toward sharing'
